

## Rule 7

Don't use any classes with more than two instance variables

---

Decrease of cohesion  
[OC:??]

- manages single instance variable
- manages coordination of two instance variables

Similar to rule 3 and 7

→ bundle to 1 behaviour

Example Name:

Full Name → Prenom, Name  
↳ List of names?

Domain Driven:

Decomposition of a model into multiple smaller models representing the model

→ Refr to DDD (already explained...)

→ leads to:

- squeeze down model
- separate model concerns

DD: Aggregate

split down vs. pick up.
